

What Makes a Visualization Complex?

Exploring Design Features Related to Visual Complexity

Kylie Lin, Sean Ru, David Rapp, Hui Guan, Cindy Xiong Bearfield

Overly complex visualizations overwhelm their audiences. However, the extent to which design choices impact people's perceptions of visual complexity (the “**amount of detail or intricacy**” in an image²) has not been systematically examined. We ask:

What design features contribute to perceptions of visual complexity?

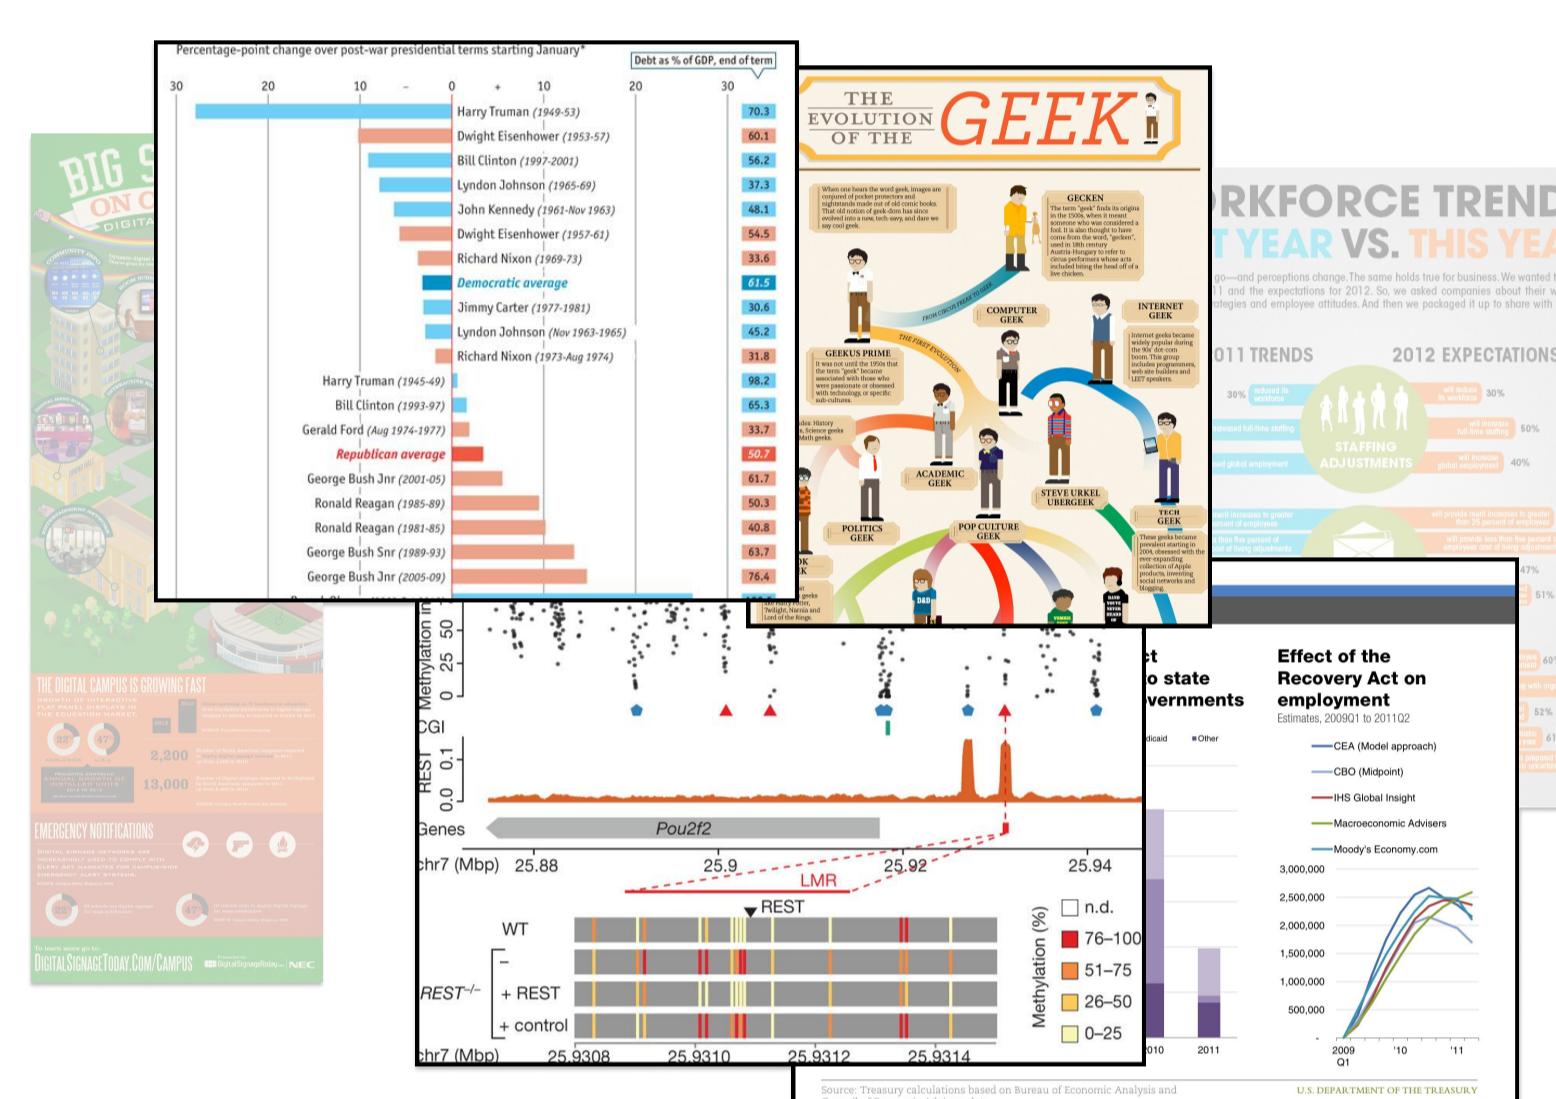

1

RELABEL THE MASSVIS DATASET

ASSOCIATIONS WITH COMPLEXITY

For all continuous labels, higher values correlate with higher complexity:

Mean perceived complexity was higher/lower when certain labels applied to a visualization:

Features ranked by importance, generated by Random Forest model

CONCLUSIONS

Intuitive Findings

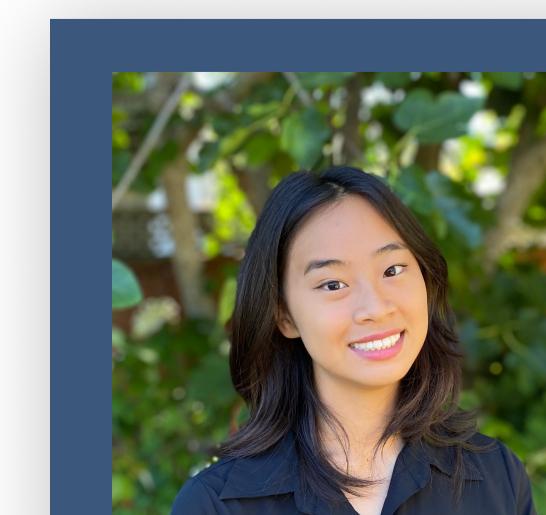

- The feature with the **most influence** on complexity is the **Number of Charts** in a visualization.
- The **more visual elements** a visualization contains, the greater its perceived complexity.
